

A young boy wearing a light blue t-shirt, brown pants, and a tan cap is riding a blue hoverboard in a modern living room. He is pointing towards a large set of glass doors that lead to an outdoor patio with white furniture. In the foreground, the back of a man's head and shoulders is visible; he is wearing glasses and holding a smartphone. The room has a light-colored wood ceiling and a white kitchen island. A large, semi-transparent circular graphic with a white arrow pointing downwards is overlaid on the scene, framing the text.

**Fast.

**The new concealed
lift-slide gear DRIVE axxent LS smart:**
fast production and installation,
ingeniously easy smart living.

DRIVE axxent LS smart.

Smart – made easy.

The invisible drive that has it all.
Convenient control via app or voice.
Intuitive integration into the existing
smart home by the end user. Enhanced
via fast production with Plug & Play
and easy installation. This has DRIVE!

DRIVE axcent LS smart at a glance.

20 Min.

From manual to motorised in 20 minutes: no design change, no special solution.

Fast and easy integration into conventional profile systems.

Produce faster

3

Three times Plug & Play: Connect drives, operator push button and battery pack quickly and securely – no electrical skills required.

Simple and failsafe: From the drive to the threshold all components are pre-assembled and ready for installation as a COMFORT UNIT.

Identical frame dimensions: Planning is just as it is with a standard manual element.

Install more easily

0

Zero extra installation work required: no additional ceiling or wall openings, no deep floor recess, no cable routings.

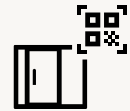

Simple set-up process using operator push button and battery pack on the sash.

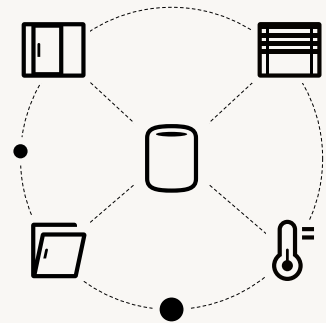

Matter-enabled and can be combined with other Matter devices: for a hassle-free smart home experience.

Control more smartly

Easy for the end user to integrate: Scan the QR code on the element and integrate intuitively into the existing smart home environment.

This enables custom scenarios with cross-manufacturer networking – for example with heating and shading.

Smart powerpack: lifts heavy elements weighing up to 400 kg in just 3 seconds, slides quickly and easily.

400 kg

3 Sec.

DRIVE axxent LS smart.

Fast production and installation.

The uncomplicated way to provide your customers with smart lift and slide elements: With the new DRIVE axxent LS smart drive you have a powerful complete package that pushes the benchmarks – from the configuration to the production to the installation on site.

Order
pre-assembled

- | | |
|-----------------------|---|
| • Lift drive | ✓ |
| • Slide drive | ✓ |
| • Battery pack | ✓ |
| + ———— | |
| • Hardware components | ✓ |
| • Threshold | ✓ |

- For timber, timber-aluminium, PVC and aluminium systems
- From 60 mm profile width
- Identical frame dimensions just like with a standard manual element
- Battery pack based system, minimisation of wiring
- Easy for an electrician to connect to the building's electrical system

Zero errors.
100% efficiency.

The configurator in the SIEGENIA Shop checks every entry immediately for plausibility and ensures a hassle-free order as a result. Combining the order with the COMFORT UNIT guarantees an optimal start in production. From the drive to the threshold all hardware components are maximally pre-assembled and ready to be installed.

**No design change.
No special solution.**

Outstanding design with less production effort: The compact design can be quickly and easily integrated into conventional profile systems. Covers made of a different material are just as unnecessary as frame and sash extensions. As a result, even narrow profiles of only 60 mm retain their high-quality look.

**Produce
faster**

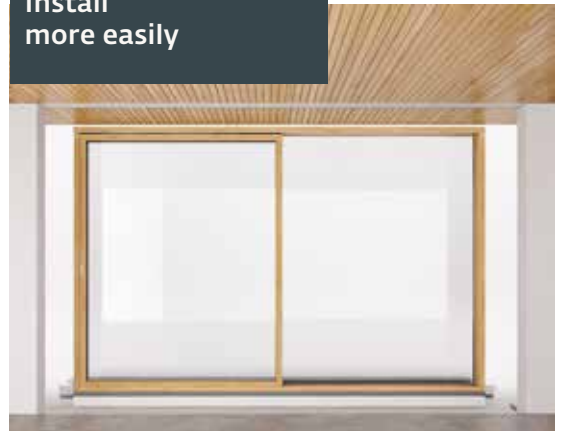

**Plug & Play in place of
electrical skills.**

The battery pack based system with 24 V makes for a simple Plug & Play of the pre-assembled components. All cables are delivered in the exact length and installed ready to plug in. The battery pack is charged and ready for use. Even the assembly openings in the guiding rail are ready made. This makes production possible with just 20 minutes of extra work compared to a mechanically operated element.

**Installation
without extra work.**

The look is the same as a standard manual element – so is the planning. Identical frame dimensions make costly ceiling or wall openings unnecessary.

**Install
more easily**

**Ready faster
after production.**

Even after production the smart element generates hardly any extra work thanks to the new drive. The simple on-site set-up is done by the window fitter or the installation company. The end user designs the subsequent integration into the existing Matter environment and the custom configuration as desired.

DRIVE axxent LS smart.

Ingeniously easy smart living.

The DRIVE axxent LS smart supports Matter, the future-proof communication standard – and with it makes a whole lot much easier for the end user. That starts with the easy integration of the drive.

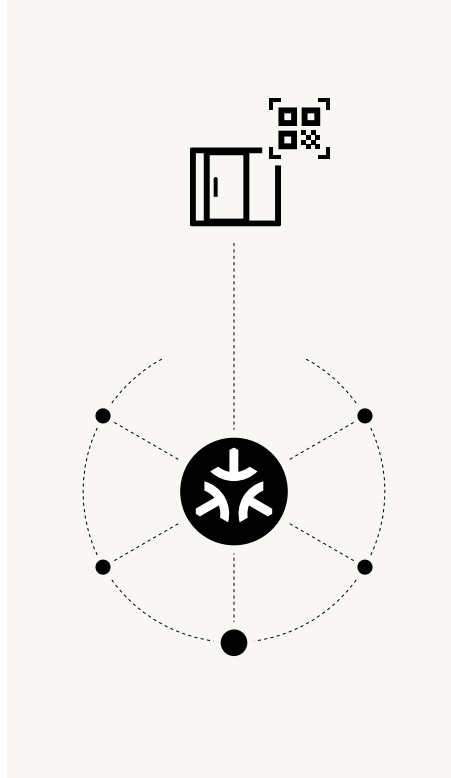

- Can be integrated into Apple, Amazon, Google or Samsung smart home systems
 - Control via app, voice assistant or Matter-enabled remote control
 - Meets requirements of operating forces and height according to DIN 18040
 - Integration via QR code
 - Components needed: wireless local area network router, home controller, Matter-enabled terminal devices and smart home app.
- Find out more about all compatible devices, home controllers, operating systems and apps:

Set up more intuitively

Made easy right from the start.

The integration into the existing smart home is very easy for the end user to carry out: The QR code on the battery pack is scanned with the smartphone and the drive appears in the smart home app and can be set up. Additional comfort functions like night ventilation or silent mode can be set up individually via the battery pack on the sash.

Live more securely

Smart security with 360° perspectives.

As a specialist for secure windows and doors we know: Security has to be completely effective. Because of that our new smart drive provides ongoing condition monitoring, end-to-end-encryption via Matter and security updates on a regular basis. Even in the event of a power failure the element remains fully functional for up to 30 hours. Better safe than sorry.

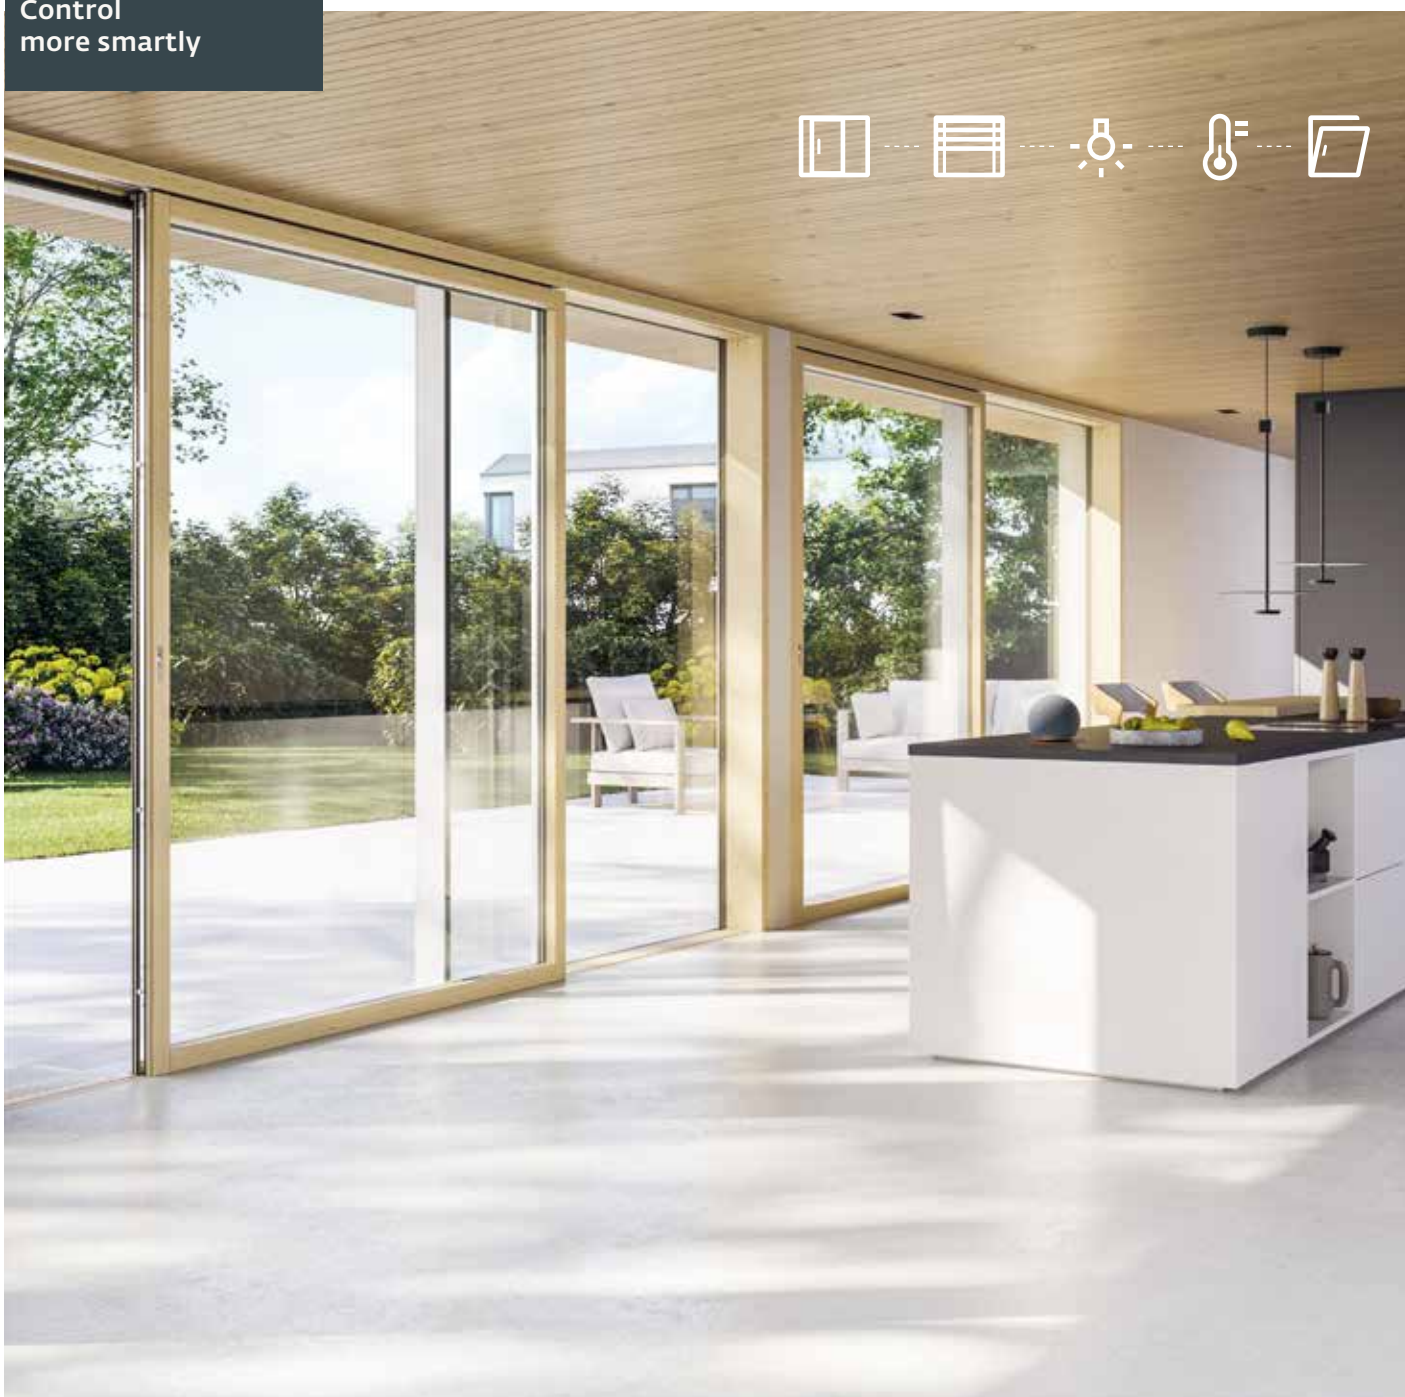

Control capabilities for every requirement.

The new smart drive provides automation for every demand – whether a more accessible home or automated smart living. For example, a Matter-enabled remote control makes operation particularly easy and intuitive for all ages. In contrast, the existing smart home app provides full access and control. And the sliding door responds to voice commands via the existing voice assistant.

Custom networking.

Matter is open for all manufacturers. As a result, the DRIVE axxent LS smart can be easily combined with other Matter devices, e.g. with shading and lighting. This enables scenarios that can be controlled centrally and make living more pleasant, more secure and more healthy fully automatically in the background. Smart technology is virtually invisible as a result – almost as invisible as the concealed drive.
